SOUTH AUSTRALIAN ECONOMIC INDICATORS

DECEMBER 1994

P.M. GARDNER
Deputy Commonwealth Statistician
and Government Statist

PREFACE

South Australian Economic Indicators is a monthly publication which contains the latest available data at the time of preparation for a range of statistical series that have been identified as indicators of economic activity in this State. In a number of cases the figures presented are preliminary and subject to revision in subsequent issues.

Written and graphic commentary have been included for many of the selected series and analysis has been augmented with the calculation of the percentage change from the previous reference period together with the presentation of comparative Australian data. Time series information has been included to provide a historical perspective on many of the selected indicators. Future issues may be expanded to include further historical data in response to expressed user needs. This product is under continuous review and any suggestions for enhancement will be welcomed.

More detailed information on each series (including explanatory and technical notes) can be obtained from other Australian Bureau of Statistics publications or alternative data sources. To assist those seeking further information a source publication for each of the series has been documented in the statistical summary.

This issue includes a special article entitled *Training and Education Experience of South Australian Workers*. Future issues will contain further articles on statistical topics which concentrate on longer term trends or other issues pertinent to the South Australian economy.

If you have any inquiries concerning this publication please contact the editor, Brian Moody, telephone (08) 237 7315. All requests for statistical information should be directed to the ABS Information Service, GPO Box 2272 Adelaide SA 5001, telephone (08) 237 7100.

REVIEW

Overview

- The underlying trend estimate of employed persons in South Australia
 has been increasing over the past 7 months while the trend
 unemployment rate has remained constant for the past 2 months.
- The value of overseas exports of South Australian produced commodities during the month of September was 11.4% above the level for August while the value of overseas imports into South Australia was 17.1% below the level of the previous month.
- Strong growth has been evident in the trend estimate for retail trade in South Australia over the year to September 1994 with an increase in turnover of 6.6%.
- Following 9 months of upward movement the provisional trend estimate for new motor vehicle registrations in South Australia has moved downwards from August to October 1994.
- The trend estimate for dwelling units approved in South Australia in September 1994 was 2.0% higher than the August estimate and 4.5% above September 1993.
- Total housing finance commitments for owner occupied dwellings in South Australia during September 1994 were 11.7% below the August figure.
- Short-term visitor arrivals to South Australia in August 1994, 35.6% down from July 1994, were 4.5% lower than in August 1993.
- In the September quarter 1994 the all groups Consumer Price Index (CPI) for Adelaide rose 0.4% resulting in an annual increase of 2.0%.

State Accounts

Gross State Product

The June quarter growth in Gross State Product (GSP) (trend estimates expressed in current prices) was 1.3%, slightly below Gross Domestic Product for Australia which rose by 1.5% for the corresponding period.

Over the year to June, the rate of growth was 5.1%, slightly below the national average of 5.5%.

Increases in wages, salaries and supplements (1.6%) and indirect taxes less subsidies (1.5%) have contributed to the growth in GSP for the June quarter 1994.

The gross operating surplus component of GSP increased by 1.0%, a lower rate of growth than in the preceding two quarters. The public trading enterprise sector contributed to the slowing growth rates for gross operating surplus. Partially offsetting this were the mining and manufacturing indicators which showed an increased rate of growth in the June quarter.

State Final Demand

State Final Demand (trend estimates in 1989-90 prices) increased 0.6% during the June quarter, approximately half the Australian average of 1.4%. The poor performance of private investment contained the overall growth rate of GSP.

Private capital expenditure declined 2.4% in the June quarter reaching the lowest level since September quarter 1984. All components of private capital expenditure declined in the June quarter except real estate expenses which remained constant.

Private final consumption expenditure and public capital expenditure increased by modest rates of 0.4% and 0.7% respectively, in the June quarter. The growth rate of government final consumption rose strongly by 3.1%.

International Accounts

Exports

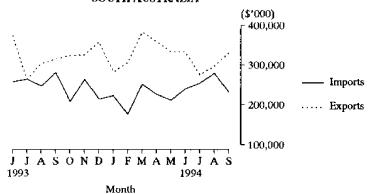

Overseas exports of South Australian produced commodities during the month of September were valued at \$330.7 million, 11.4% above the level for August. Metals and metal manufactures constituted 13.7%; petroleum and petroleum products 11.2%; and cereals and cereal preparations 11.0% of the total value.

Exports to the ASEAN countries accounted for 17.5% of the total during September, followed by Japan (12.5%) and New Zealand (9.0%).

Imports

Overseas imports into South Australia during September (compiled from import documents lodged in South Australia) were valued at \$231.4 million, 17.1% below the level for the previous month. Road vehicles, parts and accessories constituted 26.3%; machinery 23.4%; petroleum and petroleum products, 8.9%; and chemicals 8.6 % of total imports.

TOTAL MERCHANDISE IMPORTS AND EXPORTS SOUTH AUSTRALIA

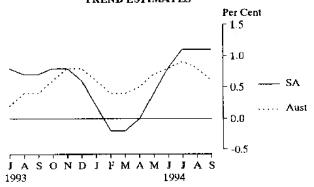

Consumption and Investment

Retail Turnover

Retail trade trend estimates indicate that retail sales for South Australia have shown an increase of 1.1% in September 1994 from August compared with an Australian rise of 0.6%. The South Australian trend estimate has shown strong growth over the last three months after being in decline in the early part of 1994. Strong growth has been evident over the past year (September 1993 to September 1994) with an increase in turnover of 6.6%. The retail turnover estimate in original terms for South Australia was \$665.8 million for September, an increase of 3.0% over the August level of \$646.6 million. Industries showing growth in the trend estimates were hotels, liquor stores and licensed clubs; clothing and fabric stores; and furniture stores.

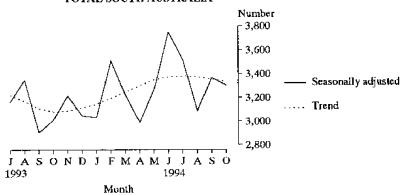

RETAIL TURNOVER PERCENTAGE CHANGE FROM PREVIOUS MONTH TREND ESTIMATES

New Motor Vehicle Registrations

The provisional trend estimate for new motor vehicle registrations in October 1994 fell 0.6% from September, after falls of 0.3% and 0.5% respectively in the previous two periods. This followed a upward movement which had been evident for 9 months. The seasonally adjusted estimate for October 1994 fell by 1.8% from September 1994 but was 9.8% higher than in October 1993. In original terms there were 3,371 new motor vehicles registered in October 1994, 6.9% less than September 1994 but 9.9% more than October 1993. For new passenger vehicles only, the leading makes registered in October 1994 were Holden (670 vehicles), Ford (602), Mitsubishi (539), Toyota (418) and Mazda (136).

NEW MOTOR VEHICLE REGISTRATIONS TOTAL SOUTH AUSTRALIA

Tourist Accommodation

When the June quarter 1994 is compared with the June quarter 1993, the number of bed spaces available in visitor hostels increased by 8.3% from 1.955 to 2,118. Guest nights occupied rose by 15.1% from 44,937 to 51,710 and the bed occupancy rate increased from 25.3% to 27.1%. Guest arrivals rose by 22.7% from 22,577 to 27,713 but the average length of stay fell from 2.0 days to 1.9 days. Accommodation takings rose from \$0.47m to \$0.48m while average takings per guest night dropped from \$10 to \$9.

Private New Capital Expenditure

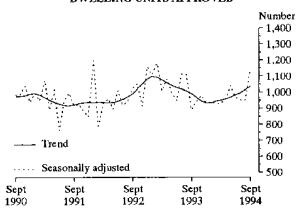

Private new capital expenditure in South Australia for the June quarter 1994 was \$349 million, an increase of 2.0% over the previous quarter. New buildings and structures accounted for \$43 million while equipment, plant and machinery was \$306 million. Private new capital expenditure during 1993-94 was 10% below the 1992-93 level.

Production

Dwelling Approvals

The trend estimate for dwelling units approved in South Australia in September 1994 was 1.036 which represented a 2.0% increase over the August estimate and 4.5% above September 1993. As a consequence of this latest estimate and revisions to previous trend values the trend series has displayed an upward movement over eight consecutive months. Despite falls in original and seasonally adjusted series for total dwellings approved nationally the trend has remained at historically high levels, rising by 1.3% in September 1994 to 16,870.

DWELLING UNITS APPROVED

Dwelling Commencements

The estimate of 2873 derived from the Building Activity Survey for the number of dwelling units commenced during the June quarter 1994 was 12.7% higher than that derived for the previous quarter. This was the result of an increase in commencements of houses outweighing a fall of 7.8% in commencements of dwellings in other residential buildings. For Australia both houses and other residential buildings contributed to the 15.0% increase in commencements to 46929.

Value of Non-residential Building Approvals The September 1994 value of non residential building approved was \$33.1 million up slightly (1.5%) from the August amount of \$32.6 million. In September, offices accounted for \$18.5 million with a single job valued at \$10.5 million being predominant. Australia-wide the value of non residential building approvals registered the relatively low level of \$563.6 million which was in stark contrast to the amount approved in August 1994 (\$869.6 million) and in the corresponding month of last year (\$923.0 million).

Value of Total Building Activity

The total value of building work commenced during the June quarter 1994 was \$329.3 million which was 4.4% higher than for the previous quarter and resulted from a 13.2% increase in the value of new residential commencements. This more than counteracted the 10.9% fall in non-residential commencements.

At \$328.8 million the value of building work yet to be done at the end of the June quarter 1994 was 2.6% below the March quarter figure and 20.3% below that for the previous June quarter. By contrast the value of work yet to be done for Australia was 7.0% higher than for the March quarter 1994 and 10.6% higher than for the June quarter 1993.

At \$352.2 million the value of building work done during the June quarter 1994 was 6.2% above the March quarter figure although still 9.4% below that for the previous June quarter. By contrast the value of work done for Australia was 16.4% higher than for the March quarter 1994 and 12.8% higher than for the June quarter 1993.

Value of Engineering Construction

The June quarter 1994 estimate of engineering construction work done in South Australia was \$197.3 million, an increase of 8.4% from the (revised) March quarter estimate of \$182.0 million. Most categories contributed toward increasing the total in June but in absolute terms roads, highways and subdivisions, and pipelines recorded the largest movements. Increased activity was widespread throughout Australia during this period as the national value of work done improved by 15.8%. All States and Territories recorded increases over the March quarter estimates.

Prices

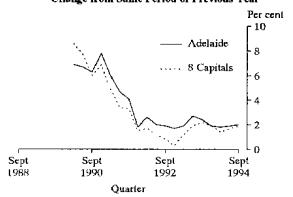

Consumer Price Index

In the September quarter 1994 the all groups Consumer Price Index (CPI) for Adelaide rose 0.4% resulting in an annual increase of 2.0%. Nationally prices rose 0.6% for the quarter and 1.9% on an annual basis.

In Adelaide the price of potatocs in the September quarter dropped from the June quarter by 4.8% to 60c per kg. This price was 15.5% cheaper than that of the corresponding period last year. The price of a 1 litre carton of milk purchased from a supermarket in September quarter 1994 increased by 4.1% from the June quarter, and by 11% from last September's price. The price of fresh whole milk in Adelaide was still cheaper than any other capital city. Similarly, the price of a loaf of bread at the supermarket increased by 6.8% between the two September quarters, however, at \$1.25 a loaf this year it was the cheapest in Australia.

As previously predicted, the additional excise on leaded petrol resulted in its price increasing between the June and September quarters of 1994 by 1.1% while the price of unleaded petrol increased by only 0.1%. It is expected that greater increases will occur in the December quarter as a result of the higher prices that prevailed during the period of petrol rationing in November. The average price of a 150g jar of coffee actually decreased by 3.5% between September quarter 1993 and June quarter 1994, however, because of a world wide shortage of coffee beans a significant increase of 33.3% occurred between the June and September quarters of 1994.

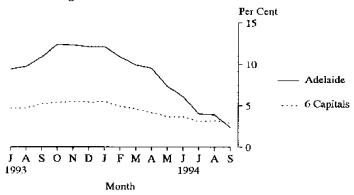

CONSUMER PRICE INDEX Change from Same Period of Previous Year

House Building Materials

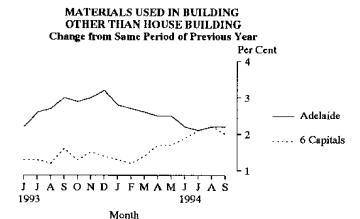

Prices of house building materials showed little movement in September 1994 rising by 0.2% both in Adelaide and nationally. The highest increases over the twelve months ended September 1994 were in Hobart and Melbourne at 3.6%. Sydney (3.1%), Perth and the Six Capitals Weighted Average (2.9%) were followed by Adelaide (2.4%) with Brisbane (1.3%) recording the lowest rise of the capitals.

Non-house Building Materials

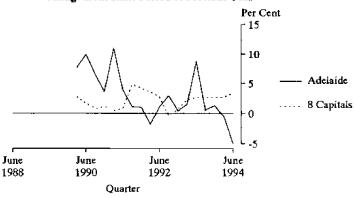

In September 1994 prices for materials used in building other than house building rose by 0.3%. Brisbane prices rose by 0.5%, while other mainland capitals recorded zero movement. Items that rose in Adelaide included structural steel (2.3%); paint (3.7%); and non-ferrous pipes (1.9%). Among items that fell were conductors (4.5%) and switchboards (2.0%).

House Prices

Nationally, established house prices increased by 3.4% in the year to the June quarter 1994, however this figure was tempered somewhat by a 5.0% downward movement in Adelaide. This negative annual movement in Adelaide contrasts with an increase of 13.5% in Darwin. Prices for established houses in Adelaide rose by 0.7% from the March quarter 1994 to the June quarter 1994 which was just over one-half of the national increase of 1.2%.

ESTABLISHED HOUSE PRICES Change from Same Period of Previous Year

Labour Force and Demography

Population

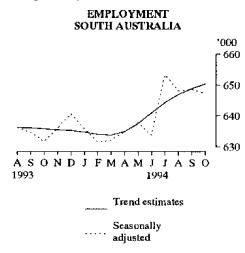

The estimated resident population of South Australia increased by 2,040 persons during the March quarter 1994 to 1,468,563. The largest component was natural increase which accounted for 2,286 persons, while the net interstate migration outflow of 1,290 persons was partially offset by a net gain from overseas migration of 1,044 persons.

Interstate departures from South Australia amounted to 8,590 persons, 2,566 (29.9%) of whom moved to Queensland. Interstate arrivals were 7,300 in the March quarter, with 1,982 persons (27.2%) coming from Victoria.

Employment

The underlying trend estimate of employed persons in South Australia has been increasing over the past 7 months. The October 1994 estimate of 650,200 was 14,400 more than the level of 12 months ago.

The underlying trend estimate of employed persons in Australia has been increasing since February 1993, reaching 8,005,600 in October 1994. Over the past 12 months, full-time and part-time employment have increased by 3 0% and 5.2% respectively.

Unemployment

The trend unemployment rate for South Australia has remained at 10.4% for the past 2 months, following a general downward movement evident in 1994. Between September 1994 and October 1994, the trend unemployment rate for males remained at 10.8% while the rate for females fell by 0.1 of a percentage point to 9.9%.

The trend unemployment rate for Australia has been decreasing since October 1993 and was 9.3% in October 1994 (9.4% in September 1994).

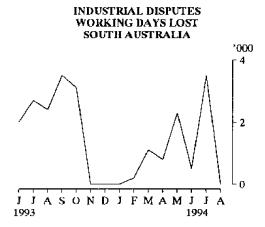

Overtime

The proportion of employees who worked overtime in South Australia in August 1994 was 18.5% compared with 17.3% in August 1993.

Industrial Disputes

There were no working days lost through industrial disputes in South Australia from July 1994 to August 1994. Compared to the other States, South Australia recorded the lowest level of disputation. For Australia, 37,200 working days were lost between July 1994 and August 1994.

In the twelve months to August 1994, 15,000 working days were lost through industrial disputation in South Australia.

Short-term Overseas Visitors Arrivals Short-term visitor arrivals to South Australia fell to 3,747 in August 1994. 35.7% down from July 1994 and were 4.5% lower than in August 1993.

Although the Australian figures for August 1994 also showed a decrease (down 3.6% to 265,210) this was still 10.5% higher than August 1993.

The State or Territory of stay of overseas visitors is determined from the intended address reported on arrival in Australian ports and airports. A short-term visit is any intended length of stay of less than 12 months.

Short-term Resident Departures

There were 9,985 short-term departures of South Australian residents in August 1994 which was 21.8% lower than July 1994 but 5.2% higher than August 1993.

There were 15.8% less short-term departures of Australian residents in August than July 1994 and this figure was only 0.6% greater than the 178,823 in August 1993.

Incomes

Average Weekly Earnings

Average weekly ordinary time earnings of adult full-time employees in South Australia increased (from \$597.30 in February 1994) to \$599.80 in May 1994. Male full-time ordinary time earnings increased to \$622.90 in May 1994, compared with \$619.90 for the previous quarter. The comparable level for females was \$551.40 in May 1994, up from \$548.80 in the previous quarter.

Average weekly total earnings for all employees in South Australia amounted to \$504.80, down from \$512.80 in the previous quarter.

Since it is an average of earnings across all employees, changes in average weekly earnings may occur through changes in employment as well as changes in pay levels.

Award Rates of Pay

Over the 12 months to September 1994, the weekly award rates of pay index for full-time adult employees in South Australia increased by 1.3%.

The largest annual movement of the index for full-time adult male employees occurred in the construction industry, with a 3.5% increase from September 1993.

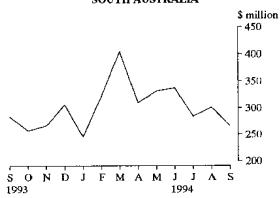

The largest annual movement of the index for full-time adult female employees occurred in the manufacturing industry, with a 2.7% increase from September 1993.

Financial Markets

Housing Finance

Total housing finance commitments for owner occupied dwellings decreased during the month of September by \$35.2 million (11.7%) to \$265.9 million.

SECURED HOUSING FINANCE COMMITMENTS TO INDIVIDUALS SOUTH AUSTRALIA

The main component, financing commitments for the purchase of established dwellings was down by \$15.0 million (8.1%) to \$170.5 million. Financing commitments for construction of dwellings was down by \$9.5 million (18.3%) to \$42.3 million and purchase of newly erected dwellings fell by \$3.8 million (24.0%) to \$12.1 million which is the lowest figure recorded in this category since December 1991.

Personal Finance

In September 1994, total personal finance commitments totalled \$165.9 million. This represented a marginal decrease of \$3.5 million (2.1%) from August 1994.

Personal finance commitments under total fixed loan commitments decreased \$3.2 million (2.6%) to \$120.5 million in September 1994. Of the main components in this category, 'used motor cars and station wagons' decreased by \$1.7 million to \$39.2 million and 'new motor vehicles and station wagons' decreased marginally by \$0.2 million (1.2%) to \$13.7 million.

Personal finance commitments under revolving credit commitments also decreased slightly by \$0.3 million (0.7%).

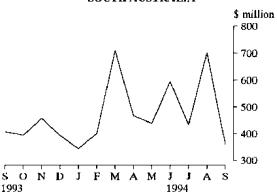

Commercial Finance

Total commercial finance commitments made by significant lenders decreased in September to \$361.3 million from the total for August of \$701.4 million. Large decreases were recorded for both commitments under fixed loan facilities and commitments under revolving credit facilities.

In September 1994 commercial finance commitments under fixed loan facilities were down \$178.4 million (43.8%) on the August 1994 figures. The most significant decrease was recorded for 'manufacturing' which was down by \$132.0 million. The 'finance, investment and insurance' industry decreased by \$13.9 million and 'agriculture, forestry, fishing and hunting' by \$14.2 million.

Commercial finance commitments under revolving credit facilities decreased significantly to \$131.9 million in September 1994 from \$293.6 million in August. The greatest decreases were in 'manufacturing' (down \$113.6 million) and 'retail trade' (down \$35.8 million).

COMMERCIAL FINANCE COMMITMENTS SOUTH AUSTRALIA

Lease Finance

The value of goods under new finance lease commitments totalled \$24.5 million in September 1994. This was a decrease of \$1.1 million (4.3%) on the August 1994 figure of \$25.6 million.

The main fall was for 'new heavy trucks,' down \$4.4 million from the very high August figure. Total motor vehicles decreased by \$4.8 million (26.1%) to \$13.5 million in September 1994. Finance lease commitments for 'electronic data processing equipment' rose by \$3.3 million to \$5.6 million and the other main increase was for 'construction and earthmoving equipment' up \$0.9 million.

Training and Education Experience of South Australian Workers

Introduction

The second Australian Bureau of Statistics (ABS) survey on Training and Education Experience in Australia was conducted in April and May of 1993 and collected information for the twelve month period immediately before the survey. A previous survey on this topic was undertaken in 1989.

Information collected included socio-demographic characteristics (such as age, sex, income and educational attainment), work history details (such as occupation, industry and job tenure), highest qualification needed to obtain job, types of training courses undertaken over a twelve month period, time spent on training courses and employer support for training courses.

The article which follows concentrates mainly on South Australian workers but for the most part the details given reflect the national experience.

Who received training?

A higher proportion of employees received training in South Australia during the 1993 survey period than in the 1989 reference period, increasing from 81% to 86%. The largest component of this increase related to on-the-job training which rose from 73% to 81%. About one-half of both male and female wage or salary earners (48% and 50% respectively) stated that they had undertaken study or training courses (as distinct from on-the-job training) in 1993

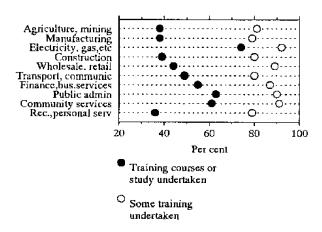

An estimated 50% of persons born in Australia or the main English-speaking countries undertook study or training courses compared with 34% of those born in other countries. This disparity was less noticeable for on-the-job training where 82% of those born in Australia or in the main English-speaking countries received on-the-job training compared with 77% of those born in other countries.

A divergence was also found between wage or salary earners with and without post-school qualifications. An estimated 57% of wage or salary earners with post-school qualifications reported undertaking study or training courses in the 12 month period, compared with 42% of those without post-school qualifications.

Fewer older workers, aged 55 to 64, received training than did younger workers. An estimated 60% of these older workers received some form of training, but only 26% undertook study or training courses, whereas 58% received on-the-job training. Of those younger workers aged 15 to 34, 92% received some form of training, with 52% undertaking study or training courses and 88% receiving on-the-job training.

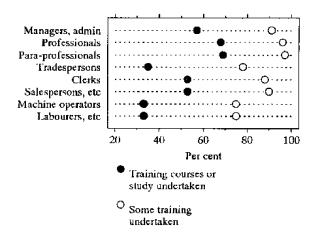

On an industry basis, wage or salary earners working in the mining; electricity, gas and water; public administration and defence; and community services industries reported the highest incidence of training. Around 90% in each of these industries reported undertaking some form of training and over 60% reported involvement in study or training courses.

WAGE OR SALARY EARNERS, INDUSTRY OF MAIN PERIOD EMPLOYER BY TRAINING UNDERTAKEN, SOUTH AUSTRALIA, 1993

The occupation groups which had the greatest proportion of wage or salary earners who undertook training in 1993 were para-professionals and professionals (97% and 96% respectively).

WAGE OR SALARY EARNERS, OCCUPATION BY TRAINING UNDERTAKEN, SOUTH AUSTRALIA, 1993

Wage or salary earners working in the public sector were more likely to receive training (90%) than those working in the private sector (84%). While both had a high incidence of on-the-job training (84% and 80% respectively), 61% of public sector employees undertook some form of study or training course, compared with 44% of private sector employees.

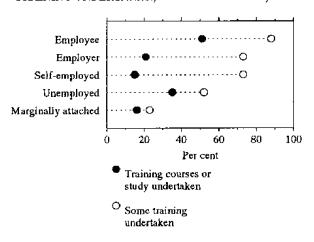

Large establishments (100 or more employees) were more likely to provide training than small establishments (fewer than 10 employees). While both had a high incidence of

on-the-job training (82% and 79% respectively). 56% of employees in large establishments undertook some form of study or training course compared with 37% of employees in small establishments.

Of the 778,700 persons who were employed unemployed or marginally attached to the labour force at the time of the survey ('Marginally attached' describes those persons aged 15 to 64 who wanted to work but were not in the labour force in the reference week.):

- just over one-half (51%) of employees had undertaken study or training courses, compared with 21% of employers and 15% of self-employed persons;
- almost twice as many unemployed persons as marginally attached persons had undertaken study or training courses (35% compared with 16%);
- among the unemployed, 40% of females had undertaken study or training courses in the 12 month period compared with 33% of males.

PERSONS IN, OR MARGINALLY ATTACHED TO, THE LABOUR FORCE: BY EMPLOYMENT STATUS AND TRAINING UNDERTAKEN, SOUTH AUSTRALIA, 1993

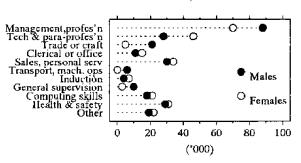

What training was undertaken?

In 1993, in-house training courses accounted for more than 3 times as many attendances in the 12 month period than external courses (530,800 compared with 154,700), with 98% of in-house training participants (518,700) having a wage or salary job. Of this latter group:

- most attendances (77%) were by participants who were full-time, permanent employees.
- just over one-half were public sector employees.
- some 80% were working for large employers (more than 100 employees throughout Australia).
- around 90% had been with their main period employer for more than a year.
- the predominant participants by occupation were professionals and clerks (26% and 17% respectively).
- management and professional courses accounted for almost 30% of attendances, followed by technical and para-professional courses (14%).
- some 56% of attendances at management and professional courses and 71% of attendances at technical and para-professional courses were by those working in the community services industry.

NUMBER OF IN-HOUSE TRAINING COURSES ATTENDED BY FIELD OF STUDY BY SEX, SOUTH AUSTRALIA, 1993

Of the estimated 154,700 attendances at external courses in the 12 month reference period:

- an estimated 11% were either unemployed or marginally attached to the labour force at the time of the survey;
- those who were employed at the time of the survey attended more management and professional courses than any other type (42% of attendances). In contrast, those who were unemployed attended more general computing skills courses than any other type;
- 58% of attendees who had a wage or salary job in the last 12 months were private sector employees.

Of the estimated 778,700 persons in, or marginally attached to, the labour force at the time of the survey, approximately 127,800 (16%) studied for an educational qualification in 1992. Of those who had studied:

- three-quarters were employees at the time of the survey, 17% were either unemployed or marginally attached to the labour force, and the remaining 8% worked in their own business;
- the vast majority (93%) reported studying for that qualification for vocational reasons;
- more reported studying for a bachelor degree (19%) than any other type of qualification.

What support was received for training?

An estimated 303,300 persons who had been wage or salary earners in the last 12 months either attended a training course in the reference period or studied for an educational qualification in either 1992 or 1993. Of these, 76% received employer support for some of that training or study. One-third did some training or study without employer support.

Of the estimated 161,000 persons who had a wage or salary job in the last 12 months which required an educational qualification to obtain that job, an estimated 65,100 (40%) received employer support to study for that qualification.

Of the estimated 64,400 persons who had a wage or salary job in the last 12 months and had attended external courses, just over two-thirds received some support from their main period employer for the external courses they attended.

Another measure of the level of employer support for training, apart from monetary support, is the amount of time spent undertaking training while employed.

- Of the 518,700 attendances at in-house courses by those who had a wage or salary job in the last 12 months, some 34% of courses were of 40 hours or more. Male participants had more attendances at these longer courses than did female participants (43% compared with 24%)
- Of the 114,200 attendances by wage or salary carners at external courses while working, 28% were courses of 40 hours or more. However, the disparity in the proportion of male and female attendances at these longer courses was less marked than for in-house courses. Almost one-third of attendances by males lasted 40 hours or more, compared with 23% of attendances by females.

What training was required to obtain jobs?

Of the estimated 588,900 persons who had a wage or salary job in the last 12 months, 276,000 (48%) held a post-school qualification.

Some 28% of both males and females in the 1993 survey reported that a qualification was required to obtain their job with their main period employer.

Of the 276,000 persons who held a post-school qualification:

- more people working in the community services industry required a qualification to obtain their job (82%) than those working in other industries;
- employees working for larger businesses were more likely to be required to have qualifications than employees working for smaller businesses (65% of those working for businesses with 100 or more employees throughout Australia, compared with 39% of those working for businesses with less than 10 employees throughout Australia);
- over three-quarters of public sector employees required a qualification, compared with just under one-half of private sector employees;
- the level of qualification most required by the main period employer was a bachelor degree or higher, comprising one-third of the required qualifications.

How was training provided?

Wage or salary earners in the last 12 months

An estimated 98% of persons who attended an in-house course and 81% who attended an external course had a wage or salary job in the last 12 months. Some 77% of all in-house training courses were conducted entirely in work time.

Persons who were employed at the time of the survey

Of the estimated 633,100 persons who were employed at the time of the survey. 192,900 (30%) had attended training courses in work time. Of these, most (93%) were employees; employers and the self-employed comprised 4% and 3% respectively.

Why was training undertaken and with what outcomes?

Persons who were wage or salary earners in the 12 month reference period undertook their main in-house course and main external course while they had a job for different reasons and with differing outcomes:

- More (15%) did their main in-house course to help obtain a promotion than those who reported that the main external course they attended while working was undertaken to help them obtain a promotion (12%).
- Similarly, 19% believed that their main in-house course was necessary for them to obtain a promotion compared with 12% who believed the main external course they attended while working was necessary to gain promotion
- A smaller proportion (38%) did their main in-house course for retraining than did so in respect of the main external course they attended while working (48%).
- Most (86%) considered that skills gained from their main in-house course could be transferred to another employer, while 92% considered that skills gained from the main external course they attended while working were transferable.
- A similar proportion (82%) of those who believed that their main in-house course had resulted in improved job performance, believed that the main external course they attended while working resulted in improved job performance.

Further Reference

Further information on this survey is available from the ABS publication, *Training and Education Experience*, *Australia*, 1993 (6278.0) which may be obtained from ABS Bookshops in all capital cities. Inquiries in South Australia should be directed to Arnold Strals on (08) 237 7332.

Year book 1995

Your Complete Reference

The 1995 South Australian Year Book is the State's encyclopaedia – nearly 400 pages of information on environment, geography, government, economy, social conditions, agriculture, manufacturing, commerce, finance, tourism, mining and energy industries.

The South Australian Year Book is the major reference publication prepared by the South Australian Office of the Australian Bureau of Statistics (ABS). It provides a detailed statistical profile of the State and reflects its social, demographic and economic development in geographical and historical context. The South Australian Year Book utilises the wide range of social and economic data available from the ABS to produce a comprehensive picture of contemporary South Australian society.

New Features

This edition contains new features on:

- + environmental management
- + major events that occurred in 1993-94
- + a regional article on Whyalla
- a special supplement on the Royal Geographical Society of South Australia.

⁽a) From September quarter 1992, caravan parks sites etc permanently reserved but only casually occupied by their tenants have been recorded continuously as site nights occupied irrespective of whether the tenants of individual sites were in residence on any particular night. Therefore occupancy measures from that quarter are not comparable with those from previous quarters.

ABS PUBLICATIONS AND PRODUCTS

Statistics collected by the ABS are generally made available to clients in published form. Some, including those not published, are available in one or more of the following forms: microfiche, magnetic tape, computer printout, CD, floppy disk, photocopy and clerically extracted tabulation.

Current publications produced by the ABS are listed in the Catalogue of Publications and Products, Australia (1101.0). The ABS also issues on Tuesdays and Fridays a Publications Advice (1105.0) which lists publications to be released within the next few days. The Catalogue and Publications Advice are available from any ABS Office.

To receive ABS publications on a regular basis contact the ABS *Publication Mailing Service* on (008) 02 0608

A large range of data is available via on-line services, diskette, magnetic tape, tape cartridge and CD ROM. For more details about our electronic data services, contact any ABS Office.

The ABS Information Consultancy Service has specialist staff to assist and advise clients with their statistical inquiries. For more detailed information about

these services call at the ABS, 55 Currie Street, Adelaide, telephone the Information Officer on (08) 237 7100, or write to Information Service, ABS, GPO Box 2272, Adelaide 5001.

The ABS also provides a Statistical Consultancy Service, for expert assistance in survey, sample and questionnaire design, data collection, processing and analysis, and statistical modelling. For more information contact Gary Niedorfer, telephone (08) 237 7379.

SYMBOLS AND OTHER USAGES

n.a. not available

n.y.a. not yet available

not applicable

0, 0.0 nil or rounded to zero

Where figures have been rounded, discrepancies may occur between sums of the component items and totals.

Year book 1995
